In this example, there were some input errors which were intentionally introduced into the note files. We'll see the errors and then review a few ways to repair them.

After click on the 'Run' button, you can see by checking the output display scroll window, that some errors have been identified.

Here is a zoomed view of the output display scroll window.

Print

Looks like an error of some type was identified in several files. The FIRST thing to do is to press the 'Reset' button on the main screen to delete the output time and note files. You don't HAVE to do this but the note files will not be overwritten on the next run but added to instead.

Before hitting the 'Reset' button, the file directory looks like this...

Please note all of the note and timesheet files which are now in the directory. Pressing reset gets rid of all of them and gets you back to the original directory files.

There is no fanfare when the 'Reset' button is clicked but the files do disappear.

Getting back to the output window, the first error found was...

/Users/joeruth/Desktop/TimeGenie/Example 2/i120326.rtf end time less than start time - 62-2 start time - 1520 end time - 1515 note header - talked to tom about Turnover updates errors found - this file is not processed ERRORS FOUND - SKIP FILE

Use Finder and TextEdit to bring up the file and start searching around for the time or the first header of the note like or the Task ID. Anything will do as long as you find the problem.

In this instance, I used finder to get to the directory and double clicked on the file.

The error is that the 'start' time is before the 'end' time. The next step would be to correct the line that is in error. In this situation, the You could turn it into a note and just use one time entry or fix the time entries so that the start time is less than the ending time. We'll make the time change because it is probably what intended.

## 62-2/15:15-15:20/x

talked to tom about Turnover updates he got joan but they're trying to figure out how to do this painlessly tom will get the options and we'll figure it out from there

611-8 / triage emails / 15:20-15:50 / t

611-8 / 15:30-15:50 / 16:15-16:30 / x talked to scott-r about TPE comm problems TPE WebMethods has been apparently messed up since yesterday possibly even since saturday right now they're hoping to come up shortly they have workarounds for most of this mess did a quick check and we can create appts if necessary

Make the change and that's pretty much that. Save the file and move on to the next error.

The next error is as follows:

/Users/joeruth/Desktop/TimeGenie/Example 2/i120327.rtf task ID not in config file - 617-22 note header - meeting: DC4 design VAS This one is pretty simple. The task 22 is not under section 6-17 in the Task ID file. Looking at the chose Task ID file, we see the following entries in the 6-17 section...

617-tasks (fourth DC) #1 - administration #2 - design #3 - coding and unit testing #4 - QA testing #5 - go live #6 - post production support #7 - post go live support #8 - WM 2011 rollout #46964 - DSG mark magic 7.2 setup
#46964 - DSG, mark magic 7.2 setup #46965 - DSG, tech potential security changes for WM 2011

We could either add a #22 line into the 6-17 section or change the original note files to no longer reference 617-22.

The last error is another missing task under the 68 section of the Task ID file. Add that in and everything is set for a rerun.

Make sure that the reset button is pressed once to make sure the output files are cleaned off and not added into again and rerun the process. Everything should be ok this time.
